

Sightline

AP Psychology · all five units

A hall with a street corner built across one end, and the identification distance painted on the floor.

READING Where this campaign stands

Seven of seven equations computed and no debt — and **eight select-only mechanism concepts, the most in the set**, plus three absent ones and 27 CHOICE stops. This is the cleanest illustration of why the gate is delivery and not variety: on equations Sightline is perfect, and on **how** it teaches it is the weakest campaign here.

Some of that is legitimate — AP Psychology asks a student to discriminate, and "identify the bias" is honestly a CHOICE. But selective attention, inattentional blindness, encoding and co-witness contamination are things a player should be made to **experience**, and this is the one subject in the catalogue where a format can do that directly.

NOW The mix as it ships

CURRICULUM What the syllabus is not getting

No equation debt. Every equation the syllabus lists is computed by a question somewhere in the campaign.

TIER Concepts the player only ever picks from a list

#	MECHANISM	CONCEPT	STOPS
4	Dark adaptation, and how long the eye takes to arrive		8, 23, 31
5	Selective attention: attending is choosing, and choosing costs		5, 11, 27, 34
6	Inattentional blindness: looking at is not seeing		11
7	Weapon focus, and what an arousing object does to a description		11
8	Encoding: memory is built at the moment, from what was attended to		5, 11, 19, 22, 27, 34, 47
13	Co-witness contamination: two accounts that have met are one account		22
16	Arousal and encoding: the amygdala, cortisol and the inverted U		5, 11, 19

Reported, never failed. Select-tier can be exactly right; these are the candidates, not the defects. The syllabus also lists 3 concepts no stop touches at all — **The cross-race effect in identification; Flashbulb memory: vivid, confident, and no more accurate; Suggestibility, repeated questioning and the child witness** — which is expected, and is a different conversation from this one.

SPOT STRONG stop 5, 11 or 34 · MEMORY / BRAIN

SPOT was designed with this syllabus in mind and Sightline does not author one. An instruction withdrawn without announcement, measured in the seconds either side of the change, is inattentional blindness and selective attention rendered rather than described — and the repo already argues that for Sightline this is the syllabus and not flavour.

SERVES concepts 5, 6 and 8 — selective attention, inattentional blindness, encoding
NEEDS at least two changes, items only one instruction wants, and only discriminating items scored

BELT STRONG a MEMORY or PERCEPT stop

A binary sort against a line that speeds up **is** a divided-attention task. The format’s own argument — this is the sorting you should be able to do without stopping to think — is the definition of automaticity, which is on the syllabus.

SERVES attention, automaticity and encoding under load
RISK decidable at a glance; and the pressure must grade accuracy, never reaction speed

SWEEP STRONG stop 8, 23 or 30 · BRAIN / IDENT

The identification distance is **painted on the floor of the hall**. Drag distance or illumination and watch identification accuracy fall away: the curve is the answer, and concept 4 — dark adaptation, and how long the eye takes to arrive — is select-only across three stops.

SERVES concepts 4 and 27; the place’s one painted line made load-bearing
NEEDS the fall-off unmarked

TALLY STRONG stop 39 or 40 · SOCIAL / MEMORY

Identifications accumulate into a hit and false-alarm rate, and d' falls out. The game already computes d' — this makes the player build the counts it comes from, and the honest decision is when there are enough.

SERVES signal detection, and concept 27 — reliability
NEEDS an early tally that flatters the witness

TRIAL MEDIUM the Ferrier Street corner

The hall has a street corner rebuilt across the end of it. Walking the reconstruction in a set order — view before you are told what to look for, never the reverse — is real procedure. Medium because one corner is a small route.

HOLD REJECT —

No physical quantity to hold; arousal is not a needle. Reject on subject rather than geometry.

LOB REJECT —

Reject.

STACK REJECT —

Would have been the best fit in the catalogue — a question rail answered under a filling well is a dual-task paradigm. Suspended repo-wide, so unavailable. Revisit when it is fixed.

No conversion adds a stop. Each changes what an existing stop **does** while leaving what it **teaches** alone. Snapshot before, diff after: curriculumDelivery.mjs sightline --snapshot before.json , then --against before.json .

Minimum honest 3 STOPS · ONE SITTING

11	d4	BRAIN	DIAGNOSIS → SPOT	The middle of the event and its edges the middle of the event and its edges — with the instruction withdrawn
8	d3	BRAIN	CHOICE → SWEEP	What the dark takes what the dark takes, as a curve against time
5	d2	MEMORY	CHOICE → BELT	Six seconds, and what they hold six seconds, and what they hold, under divided attention

CHOICE 27 → 25 (49%) · moves 31·16·4 → 28·16·7 · effective formats 3.2 → 3.7 · 3 new operate stops, 2 of them arcade

Balanced 6 STOPS · THE RECOMMENDATION

11	d4	BRAIN	DIAGNOSIS → SPOT	The middle of the event and its edges
8	d3	BRAIN	CHOICE → SWEEP	What the dark takes
5	d2	MEMORY	CHOICE → BELT	Six seconds, and what they hold
22	d7	MEMORY	CHOICE → TRACE	Twenty minutes on the kerb twenty minutes on the kerb — two accounts that have met are one account
40	d12	MEMORY	CHOICE → TALLY	What Aktaş remembers now what Aktaş remembers now, accumulated into a rate
33	d10	SOCIAL	CHOICE → CONTROL	Nobody said anything nobody said anything — change one thing and put it back

CHOICE 27 → 22 (43%) · moves 31·16·4 → 25·17·9 · effective formats 3.2 → 4.6 · 5 new operate stops, 2 of them arcade

Ambitious 9 STOPS · ADDS WORLD WORK

11	d4	BRAIN	DIAGNOSIS → SPOT	The middle of the event and its edges
8	d3	BRAIN	CHOICE → SWEEP	What the dark takes
5	d2	MEMORY	CHOICE → BELT	Six seconds, and what they hold
22	d7	MEMORY	CHOICE → TRACE	Twenty minutes on the kerb
40	d12	MEMORY	CHOICE → TALLY	What Aktaş remembers now
33	d10	SOCIAL	CHOICE → CONTROL	Nobody said anything
19	d6	BRAIN	CHOICE → CLOUD	What the hormones cannot explain what the hormones cannot explain — a band, not a value
47	d14	BRAIN	CHOICE → ATTEST	What being frightened is evidence of being frightened as evidence — the record is not the condition
30	d9	IDENT	CHOICE → TRIAL	What this does and does not settle the corner, walked in the order procedure requires

CHOICE 27 → 19 (37%) · moves 31·16·4 → 22·19·10 · effective formats 3.2 → 5.8 · 6 new operate stops, 3 of them arcade

THE ORDER OF WORK

1. Phase 0 — teach the coverage check to read an instrument's own board, and re-baseline curriculum-debt.json. Rewriting a stop that already teaches the thing is the exact failure the check exists to prevent. 2. Snapshot. 3. Edit the book, never the generated content — tools/import-book.mjs books/sightline.yml sightline --verify. 4. npm run traps: every instrument's trap must fire. 5. npm run check sightline and npm run drive sightline, right answer and wrong — ask what a player who understood nothing would score before believing any pass mark. 6. --against the snapshot. A changed format is reported; a changed objective fails.

Counts computed from `themes/sightline/content/` via `engine/dev/curriculumDelivery.mjs`; concept and equation lists authored in `tools/syllabus.js`. Format verdicts and slates are editorial. Run it with `THEME=sightline npm run dev`.
